

FEATURES:

75W isolated DC-DC converter
Ultra-wide input and regulated single output

- ◆ Ultra-wide input voltage range:43-160V_{DC}
- ◆ High efficiency up to 91%
- ◆ Low no-load power consumption
- ◆ Reinforced insulation,input-output isolation test voltage:3kV_{AC},input-case isolation test voltage:2.1kV_{AC}
- ◆ Operating ambient temperature range:-40℃ to+105℃
- ◆ Input under-voltage protection,output short-circuit,over-current,over-voltage, over-temperature protection
- ◆ Industry standard 1/4 brick
- ◆ Meets EN50155 railway standard

Typical Characteristic Curves

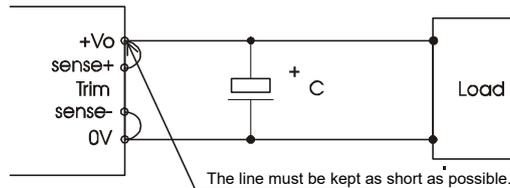

Notes:

- 1: Temperature derating curves and efficiency curves are typical test values.
- 2: Temperature derating curve in accordance with our laboratory test conditions for testing, the actual use of environmental conditions if the customer is not consistent, to ensure that the product aluminum shell temperature does not exceed 100°C, can be used within any rated load range.

Remote Sense Application

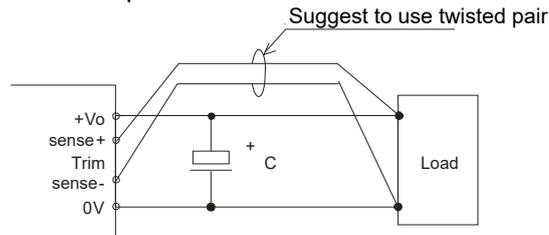

1. Remote Sense Connection if not used

Notes:

- (1) If the sense function is not used for remote regulation the user must connect the +Sense to +Vo and -Sense to 0V at the DC-DC converter pins and will compensate for voltage drop across pins only.
- (2) The connections between Sense lines and their respective power lines must be kept as short as possible, otherwise they may be picking up noise, interference and/or causing unstable operation of the power module.

2. Remote Sense Connection used for Compensation

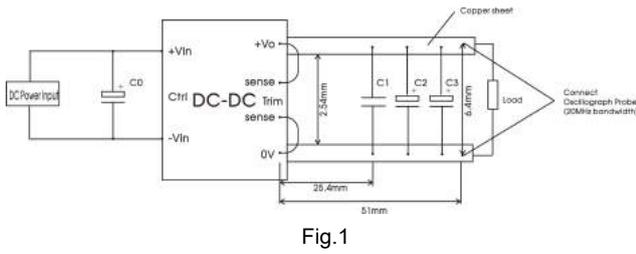

Notes:

- (1) Using remote sense with long wires may cause unstable output, please contact technical support if long wires must be used.
- (2) PCB-tracks or cables/wires for Remote Sense must be kept as short as possible. Twisted pair or shielded wires are suggested for remote compensation and must be kept as short as possible.
- (3) We recommend using adequate cross section for PCB-track layout and/or cables to connect the power supply module to the load in order to keep the voltage drop below 0.3V and to make sure the powersupply's output voltage remains within the specified range.
- (4) Note that large wire impedance may cause oscillation of the output voltage and/or increased ripple. Consult technical support or factory for further advice of sense operation.

Design Reference

1. Ripple/Noise

All the DC-DC converters of this series are tested before edelivery using the recommended circuit shown in Fig.1.

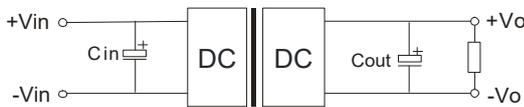

Capacitors value	C0(μF)	C1(μF)	C2(μF)	C3(μF)
Output voltage	100	1	10	1000
3.3Vdc				680
5Vdc				220
12Vdc				
15Vdc				
24Vdc				
48Vdc				

2. Typical application

We recommended using Chewins's EMC circuit, otherwise please ensure that at least a 100μF electrolytic capacitors is connected at the input in order to ensure adequate voltage surge suppression and protection.

Input and/or output ripple can be further reduced by appropriately increasing the input/output capacitor values C_{in} and C_{out} and/or by selecting capacitors with a low ESR (equivalent series resistance). Also make sure that the capacitance is not exceeding the specified max. capacitive load value of the product.

Capacitors value	Cout(μF)	Cin(μF)
Output voltage	1000	100
3.3Vdc	680	
5Vdc	220

TRIM resistor connection(dashed line shows internal resistor network)

Trim resistor calculation:

$$\begin{aligned} \text{up: } R_T &= \frac{aR_2}{R_2-a} - R_3 & a &= \frac{V_{ref}}{V_{o'} - V_{ref}} \cdot R_1 \\ \text{down: } R_T &= \frac{aR_1}{R_1-a} - R_3 & a &= \frac{V_{o'} - V_{ref}}{V_{ref}} \cdot R_2 \end{aligned}$$

1. The recommended unbalance degree of the dual output module load is $\leq \pm 5\%$; if the degree exceeds $\pm 5\%$, than the product performance cannot be guaranteed to comply with all parameters in the datasheet. Please contact our technicians directly for specific information;
2. The maximum capacitive load offered were tested at nominal input voltage and full load;
3. Unless otherwise specified, parameters in this datasheet were measured under the conditions of $T_a=25^\circ\text{C}$, humidity $<75\%$ with nominal input voltage and rated output load;
The maximum capacitive load offered were tested at nominal input voltage and full load;
4. All index testing methods in this datasheet are based on our Company's corporate standards;
5. The performance parameters of the product models listed in this manual are as above, but some parameters of non-standard model products may exceed the requirements mentioned above. Please contact our technicians directly for specific information;
